

NUTRITION TIPS FOR SUSTAINABLE FAT LOSS

BY FARZANA WALJI-HOODA

Top Nutrition tips For Sustainable Fat Loss

The key factor to ensuring you achieve fat loss with this guide is creating a daily calorie deficit.

This deficit should not be too drastic to ensure your performance and health remains high.

You can't sustain a massive reduction in calories for a long period of time as the body gets fatigued and there is nothing worse than feeling hungry, resulting in giving up!

Being in a small deficit will also help to reduce cravings and hunger levels and the weight will come off gradually for a more sustainable lifestyle change.

Being in a deficit could be as simple as cutting your portions a little for each meal.

Or removing a high energy snack from your diet in order to create this deficit. And moving more will speed up the process too.

Eat whole, natural foods so that your body is able to metabolise as efficiently as possible.

Here are my top tips for sustainable fat loss:

1. Make protein and veg the focus of your meals.

- Get enough lean proteins. Around 25g-30g per main meal. Or if you don't wish to weigh; a palmful.
- Protein promotes muscle growth and repair as it is made up of amino acids, which are the building blocks of your muscles. It's the preferred fuel to burn fat.
- The macronutrient also slows down digestion and keeps us fuller for longer!
- It is also difficult to over consume protein as it's so filling and satiating.
- It helps balance your blood sugars so that you don't have intense cravings.
- Protein speeds recovery after exercise/injury.
- It also reduces muscle loss whilst 'dieting'.

2. Always sit down with a clear space when you are eating and be calm!

- Refuel and re-energies.

3. Sit for even the tiniest morsel of food.

- It will give you that pause before eating and make you more mindful of your choices.

4. Give thanks before eating.

- It will clear your mind and calm your nervous system, a key component when trying to lose weight.

5. Use a smaller plate to eat from.

- It will trick your brain into thinking you are eating more than you are!

6. Drink a glass of water before eating anything.

- Even a snack.

7. Eat your vegetables first.

8. Avoid temptation – Eliminate the triggers.

- If this helps- don't leave anything in the house that you are likely to snack on and that is not conducive to your goal.

9. Eat healthy fats.

- e.g avocado, nuts, seeds in small quantities and avoid saturated fats, crisps, chocolate, cakes.
- 'Good' fats are essential for balancing hormones and for satiety but should be eaten in moderation.

10. Raise your heart rate for half hour a day at least in any way you desire.

11. Focus on whole foods.

12. Start the day as you mean to go on.

- Any kind of movement first thing will energize you and help you make better choices for the day ahead. Whether it be walking, stretching, yoga, playing around with the kids. Make it a habit to move every single morning.

13. Get some sunlight in the morning.

- There are numerous benefits to getting some natural light first thing. Sunshine regulates your circadian rhythm by telling your body when to increase and decrease your melatonin levels. So, the more daylight exposure you can get, the better your body will produce melatonin when it's time to go to sleep.

Last but not least, approach everything you do from a place of love. You don't exercise or eat nutritionally dense food as a punishment or a way to deprive yourself.

You are doing this because you love and respect your body to make a positive change for life.

WEEKLY WORKOUT

This simple guide will give you the basics of full body workouts and the nutrition to match.

Full body workouts and with the nutrition to match, will result in great fitness and strength as well as body changes.

If you are stuck for ideas, keep things simple.

Simple doesn't mean easy. You will still need to put in the work. Give these full body workouts a go over the next few weeks.

Try to train 3 or 4 times per week. Alternating each workout such as A, B, A, B etc.

As the weeks go on, progressively increase the weights you are using.

Pair these with the nutrition advice given and let's see what differences we can make over the next few weeks.

Supersets – Perform exercise a) and then directly into exercise b) without any rest - then rest after performing both exercises. Repeat for desired Sets x Reps.

WORKOUT A

Workout A	Exercise	Muscle Group	Sets x reps	Rest
A1	Leg Press Machine or Squats or Goblet Squat	Legs	4 x12	
A2	Russian Twist	Core	x16	60s
B1	Single arm row	Back	4 x 12	
B2	Plank	Core	30-45s	60s
C1	Romanian deadlift	Hamstrings/glutes	4 x12	
C2	Med Slam Ball / Burpees	Full Body	x15	60s
D1	Shoulder Press	Shoulders	4 x 12	
D2	Kettlebell swings	Full Body	30-45 s	60s
E1	Bicep Curl	Biceps	4 x12	
E2	Tricep Extension	Triceps	4 x12	60s

WORKOUT B

Workout B	Exercise	Muscle Group	Sets x reps	Rest
A1	Deadlift or Back extensions	Lower Back	4 x 12	
A2	Plank Pull Through	Core	x16	60s
B1	DB Chest press	Chest	4 x 12	
B2	Half sit up	Core	X 8	60s
C1	Goblet squat	Legs/glutes	4 x12	
C2	Burpees	Full body	x10	60s
D1	Single Arm Rows	Back	X10 ES	
D2	Bicep Curl	Biceps	3 x10	60s
E1	Tricep Pullovers	Triceps	3 x10	
E2	Walking Lunges	Legs	3 x 10	60s
